

GrantGenie-AI

Problem Statement

1. Project Title

GrantGenie-AI: Agentic AI Based Startup Grant Recommendation and Proposal Generation System

2. Problem Statement

Many startups struggle to identify suitable government grants and funding opportunities because grant programs have different eligibility criteria, sectors, funding limits, and application requirements.

Entrepreneurs often spend significant time manually searching through multiple portals, understanding eligibility rules, and preparing funding proposals. This creates a barrier, especially for early-stage startups that lack dedicated resources for funding research.

There is a need for an intelligent AI-powered system that can analyze startup information, recommend relevant grants, verify eligibility, and assist in generating funding proposals.

3. Proposed Solution

GrantGenie-AI is an Agentic AI platform that helps startups discover and apply for suitable funding opportunities.

The system uses multiple AI agents:

Startup Profile Agent

- Extracts startup domain, country, stage, technology, and funding requirements from user input.
- Creates a structured startup profile.

Grant Recommendation Agent

- Analyzes startup information.
- Recommends suitable grants based on sector, location, and funding requirements.

- Provides matching scores and explanations.

Eligibility Verification Agent

- Checks whether the startup satisfies grant requirements.
- Identifies matched conditions and missing requirements.

Proposal Generation Agent

- Generates a structured funding proposal including:
 - Problem statement
 - Solution overview
 - Technology details
 - Funding requirements
 - Expected impact

4. Objectives

The objectives of this project are:

- Automate grant discovery for startups.
- Reduce time spent searching funding opportunities.
- Provide personalized grant recommendations.
- Assist entrepreneurs in understanding eligibility requirements.
- Generate AI-assisted funding proposals.

5. Technology Stack

Frontend

- React.js
- Vite
- CSS

Backend

- Python
- FastAPI

Artificial Intelligence

- IBM watsonx.ai
- Large Language Models
- Agentic AI Workflow

Deployment

- Render (Backend)
- Vercel (Frontend)

6. Expected Outcome

The system provides startups with:

- Personalized startup analysis
- Suitable grant recommendations
- Eligibility assessment
- AI-generated funding proposals

This helps entrepreneurs make faster and better funding decisions.

7. Future Enhancements

- Real-time grant database integration
- More government funding sources
- Automated application submission assistance

- Multi-language support
- Startup success prediction
